SCL enhances code quality with Testwell software

SCL signs distribution agreement with Verifysoft GmbH to distribute the Testwell test coverage and complexity analysis software in the UK

Crawley, UK – 20 November 2013 – [SCL](#), a leading UK based software and services company, today announced that it has entered into an agreement with Verifysoft Technology GmbH to distribute the Testwell test coverage and complexity analysis software in the UK and Ireland.

“We have selected the Testwell software because it allows our customers to perform code coverage on any embedded target supporting the certification process for a variety of Standards such as DO178-C, IEC61508, EN50128 and ISO26262”, said Alan Hall, Managing Director at SCL. He went on to say “The Testwell software provides complementary capability to our existing technology for Static analysis with the CodeSonar and Lattix products.”

Klaus Lambertz, CEO of Verifysoft Technology GmbH, said “I am delighted to be working with SCL to launch our products into the UK market, their technical support and customer support will provide valuable local resources for the Testwell software”

Testwell CTC++ is the ideal tool to measure code coverage on embedded targets and microcontrollers. Testwell CTC++ can be used on host as well as for measuring code coverage in embedded targets and microcontrollers.

Benefits include:

- very low instrumentation overhead
- performs code coverage in all targets
- works even with smallest targets and microcontrollers
- works with all compilers / cross-compilers

About SCL

SCL's goal is to help customers understand and uncover behavior in websites, customer and code. For developers we provide software that enables them to test early and often, to uncover defects early, ensure code is thoroughly tested and understand dependencies in their code faster and more cost effectively. SCL has over 20 years of experience of delivering software development tools and solutions.
